PROFILE

Completed the Google Data Analytics Professional Certificate in May 2026, working through it around full-time shifts. Since then I have built self-directed projects to practise properly rather than follow tutorials — the finished one is an 11-year dataset where I spent longer checking the analysis for mistakes than producing it, and found four. Solid with Excel, currently learning SQL and Power BI. Looking for an apprenticeship or junior analyst role in Greater Manchester.

KEY SKILLS

- **Excel:** PivotTables, XLOOKUP, SUMIFS, data cleaning and validation, charts and summary tables
- **Analysis:** Descriptive statistics, trend analysis, segmentation and group comparison, correlation analysis, Monte Carlo simulation
- **Currently developing:** SQL (SELECT, WHERE, GROUP BY), Power BI, Python
- **Reporting:** Word and PowerPoint, written summaries, documentation for non-technical readers
- **Professional:** Accuracy and attention to detail, working to documented procedure, meeting deadlines under pressure

ANALYTICAL PROJECTS

Dataset analysis and error checking | Self-directed 2024 – present

- Worked with a purchased historical dataset covering 11 years, which produced around 12,400 records to analyse.
- Built summary reports — running totals, monthly breakdowns and comparisons across six data series.
- Ran a simulation 5,000 times to show a realistic range of outcomes rather than one figure.
- Changed each assumption in turn to find out which ones the answer actually depended on.
- Found four mistakes in my own testing method and wrote them up instead of reporting the result.
- Python written with AI help (Claude). The test design, data work and interpretation were mine. Full write-up on my portfolio site.

Coffee shop sales dashboard | Self-directed In progress

- Building an Excel dashboard from coffee shop sales data — revenue by product, by day and by time of day — using PivotTables and charts to show where the money actually comes from.

CERTIFICATION

Google Data Analytics Professional Certificate | Coursera May 2026

- Nine courses covering the analysis process, asking effective questions, preparing and cleaning data, analysis, visualisation and Python, finishing with a capstone case study.
- Credential ID AGJWYK6QJT6 — verifiable at coursera.org/verify/professional-cert/AGJWYK6QJT6

EMPLOYMENT HISTORY

Poultry Operative | Birtwistle's Catering Butchers, Manchester 2025 – present

- Work to documented procedures and quality standards in a high-volume, traceability-critical production environment.
- Daily exposure to how downtime, yield loss and rework affect output and cost.

Operations Assistant | Marks & Spencer 2023 – 2024

- Monitored fridge and freezer temperatures through compliance software, checking readings against food safety thresholds and escalating breaches.
- Coordinated stock flow in a fast-moving retail environment with strict deadlines.

Line Operator | Kingland Drinks, Manchester 2021 – 2022

- Used on-site computer systems to monitor line operability and output, keeping production running and identifying stoppages.

Apprentice Heavy Vehicle Technician | Northern Commercials (IVECO), Irlam 2017 – 2021

- Diagnosed electrical faults using wiring diagrams and test equipment — isolating a variable, testing it, eliminating it and working through to the cause.
- Worked to documented health, safety and quality procedures in a commercial workshop from the age of 17.

UPVC Operative | Aztec Windows, Cadishead 2016 – 2017

EDUCATION

GCSEs | St Patrick's RC High School, Manchester

- ICT (A*), English (B), Mathematics (C), Science (C), Religious Education (C), Computer Science (D), Spanish (D).
- Interests: running and fitness, self-directed data analysis projects, reading and problem solving.
